

Dense milfoil in Goose Bay

Goose Bay - Milfoil Control Fundraising Campaign

Goose Bay Reclamation Corporation (GBRC) is raising funds to eliminate milfoil from Goose Bay by 2027. The \$100,000 project cost is substantially lower than previous milfoil projects. GBRC currently has \$35,000 on hand to contribute, so we need to raise an additional \$65,000 to fund the project. We hope you will support this effort to restore and maintain Goose Bay!

The proposed 150-acre treatment would effectively eliminate milfoil from Goose Bay for 3 years, enabling implementation of an Early Detection Rapid Response approach to milfoil control going forward. Subsequent to the treatment, GBRC will implement a milfoil monitoring program to identify emergent milfoil growth so it can be eliminated at substantially lower cost before it spreads out of control.

Please consider a generous donation to support this project to restore and maintain Goose Bay as a premier wildlife, fishing and watersports area for residents and visitors. You can donate by mail or online at our website, goosebayreclamationcorp.org. You can also use the QR code to donate via Zeffy, a crowdfunding platform.
